                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                92:
         Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

-!-FUNCTION: May play a pivotal role in forebrain function.
-!- grinction: May play a role in constraining the orientation of vitro. May play a role in constraining the orientation of longitudinally projecting axons (By similarity).
-!- SUBCILIULAR LOCATION: Type I membrane protein.
-!- TISSUE SPECIFICITY: Highly expressed in brain; expressed embryonic floor plate, roof plate and hindbrain segments.
-!- SIMILARITY: Belongs to the ephrin family.
                                                                                                                                                                                                                                                                                                                              Pfam; PF00812; Ephrin; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            'Generation and initial analysis of more than 15,000 and mouse cDNA sequences.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  vitro. May play a role in constraining the orientation of longitudinally projecting axons.

SUBUNIT: Interacts with GRIP1 and GRIP2 (By similarity).

SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: Expressed on lateral floor plate cells, specifically on commissural axon segments that have passed through the floor plate. Expressed in cells of the retinal ganglion cell layer during retinal axon guidance to the optic disk.

DEVELOPMENTAL STAGE: Expressed in the floor plate throughout the period of commissural axon pathfinding.

SIMILARITY: Belongs to the ephrin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: May play a pivotal role in forebrain function. Binds and induce the collapse of, commissural axons/growth cones in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: Expressed on lateral floor plate cells, specifically on commissural axon segments that have passed throuthe floor plate. Expressed in cells of the retinal ganglion cell layer during retinal axon guidance to the optic disk.

DEVELOPMENTAL STAGE: Expressed in the floor plate throughout the
                                                                                                                                                                                                                                                                                                                                                                                                                               period of commissural axon pathfinding. PTM: Inducible phosphorylation of tyrosine residues in cytoplasmic domain (By similarity). SIMILARITY: Belongs to the ephrin family.
